AXIAL DROPLET SEPARATOR

Application:

- Removal of mist from an airstream
- Horizontal airflow
- Air flow rates: 3,500 to 70,500 cfm
- Operating pressure: +/- 30 inWC

Features:

- Compact centrifugal separator with stationary impeller blades at inlet
- Concentric axial inlet and outlet
- · Semi-tangential drain connection
- Inspection port

Benefits:

- · Compact design
- Uses intermittent cleaning water system for reduced water consumption
- Simple, reliable, and easy to maintain

How it works:

- An internal vortex is created as the air enters through the stationary impeller blades
- Droplets separate due to centrifugal action
- The water is drained through the tangential drain connection
- The rotation of the airflow is stopped as the air exits through the vortex breaker
