

SOUND ATTENUATING ENCLOSURE

Application:

- Absorptive-type sound attenuation
- Unit is custom-designed to suit enclosed equipment

Features:

- Removable panels with handles
- Vented as required to suit internal heat gains
- Sized to suit equipment including openings for ducting and piping
- Available in stainless steel or aluminum construction

Benefits:

- Simple, reliable, and easy to maintain
- Heavy-duty construction

How it works:

- The removable panels hold sound attenuating media between a solid exterior sheet and a perforated inner plate
- Noise generating equipment is housed within
- Vents are sized to suit internal heat gains
